Request Information
Request Description
The system must have the capability to store and manage user and moderator information in a secure and scalable manner. This includes user and moderator login credentials, profile details, and associated data.
Justification
Utilizing AWS database services allows for centralized storage of user and moderator information, streamlining data management and ensuring a single source of truth for user-related data.
Effect if declined (Risk if the project request is declined)
Declining the implementation of user and moderator information storage in an AWS database would have several consequential impacts on the system's functionality, performance, and long-term sustainability.
Request Alternatives (if exists)

Request Review Information		
Review Date	Reviewer Name and Signature	Reviewer Conclusion
